

## Science Medallists

The Society awards three medals to promote and recognise excellence in pharmaceutical science: the Harrison Memorial Medal, the Hanbury Memorial Medal and the Conference Science Medal.

### Harrison Memorial Medal

This medal is purchased from the fund raised in memory of the late Col EF Harrison, a distinguished pharmaceutical chemist, who was appointed Director of Chemical Warfare in 1918.

Originally the medal was awarded every two years, the medallist also receiving a prize of books or equipment. It was open for competition among pharmacists of not more than five years' standing who were required to present for the consideration of the Adjudicating Committee a paper or papers representing their own original work in the chemistry of drugs.

The Adjudicating Committee was composed of three members nominated by the Council of the Pharmaceutical Society and three members nominated by the Executive of the British Pharmaceutical Conference.

In 1927 the Committee decided to devote the income from the Fund to the institution of a lecture and a medal.

Nowadays the award is made by the Council of the Society, to a pharmacist who has a distinguished career in advancing the science and practice of pharmacy. The person to whom the award is made delivers the Harrison Memorial Lecture on a subject relating to the science and practice of pharmacy, and receives the medal in silver.

### **Hanbury Memorial Medal**

The Council of the Pharmaceutical Society are the trustees of a Fund raised to establish a memorial to Daniel Hanbury, who died in 1875. The memorial takes the form of a Gold Medal which is given for "high excellence in the prosecution or promotion of original research in the Natural History and Chemistry of Drugs," the medallist being required to deliver an evening lecture on his work that formed the basis of the award.

The award is made by a committee comprising the Presidents for the time being of the Linnean Society, the Royal Society of Chemistry and the Royal Pharmaceutical Society, together with the Science Chairman of the British Pharmaceutical Conference and one pharmaceutical chemist.

### **Conference Science Medal**

At the British Pharmaceutical Conference held at Leeds in 1970, the Conference Science Medal was established to encourage younger scientists. The recipient of the medal is invited to present a lecture on his or her work at the British Pharmaceutical Conference.

Currently, applications from any scientist in a pharmaceutical or allied discipline, under the age of 35 years on March 31 in the year of the award, are considered. The candidates should have a proven record of independent research and published work showing outstanding promise. As well as the medal, the successful applicant also receives £500 (£750 from 2001).

The award lecture is delivered at the British Pharmaceutical Conference in the year following the award. In 1995 it was decided that not more than one award should be made each year.
